This issue of the OECD Economic Outlook analyses the impacts of COVID-19 on the economy and puts forward projections for output, employment, prices, fiscal and current account balances.

With the global economy gaining

File Type PDF

2017 Outlook

Some momentum, economies of Latin America and the Caribbean are recovering from a recession at the regional level in 2016. This gradual improvement can be understood as tale of two adjustments, external and fiscal, that are ongoing in response to earlier

shocks. But headwinds from commodity terms-of-trade shocks and country-specific domestic factors are fading, paving the way for real GDP to grow by about 1 percent in 2017. Regional activity is expected to pick up further momentum in 2018,

File Type PDF

2017 Outlook

but at a slower pace than previously anticipated, while medium-term growth is projected to remain modest at about 2.6 percent.

The outlook is shaped by key shifts in the global economic and policy landscape—where slow growth, low productivity, and

File Type PDF

high income

inequality are creating pressure for a shift toward inward-looking policies in some advanced economies.

Domestic fundamentals and developments, however, will continue to play a significant role in

determining growth for the region. At the same time, risks to the outlook have widened in a setting of higher global uncertainty. In this challenging external context, countries should aim for completing fiscal and external adjustments to preserve or rebuild

benefits and risks of using artificial intelligence to advance global sustainability. Dauvergne finds that corporations and states often use AI in ways that are antithetical to sustainability. The competition to profit from AI is entrenching

management, revving up resource extraction, and turbocharging consumption, as consumers buy new smart devices (and discard their old, less-smart ones). Smart technology is helping farmers grow crops more efficiently, but also

empowering the agrifood industry. Moreover, states are weaponizing AI to control citizens, suppress dissent, and aim cyberattacks at rival states. Is there a way to harness the power of AI for environmental and social good?

Dauvergne argues
