Dr. ZAHID AHMAD SIDDIQI Engineering and Technology, Lahore. ISSN: 1995-1302 Assessing Suitability of Margalla Crush for Ultra High Strength Concrete ... Basics of the Engineering Drawing, ISBN 978-969-8633-00-7, Help Civil Engineering Publishers, Lahore, 2011. 2.

The aim of this book is to present the basic concepts of mechanics of materials to beginners in a simplified and an organized way. Some knowledge of general mechanics is assumed as a prerequisite. More advanced topics are not covered in this presentation to avoid unnecessary confusion. The advantages and disadvantages of two common building materials, namely, reinforced concrete and steel, are listed in order to make comparison between the two materials and to make the reader able to select proper material of construction for a particular project. The basics of the design procedure are also explained in order to introduce the concept to the beginners. Basic tests performed on structural steel are also discussed in brief. Both SI and US Customary units are used throughout the book to make it a general reference. It is hoped that this book will also serve as a quick guide for the experienced engineers. Suggestions for further improvement of the presentation will be highly appreciated and will be incorporated in the future editions.

This self-contained comprehensive book has been written to cover almost all important topics on engineering drawing to introduce polytechnic and undergraduate students of engineering to the standards and convention of technical drawing. Initial chapters of the book cover basics of line work, engineering scales, engineering curves and dimensioning practices. In the next stage, fundamental principles of projection are discussed in detail. Subsequent chapters cover topics on orthographic projections of points, lines, planes and solids. First-angle projections have been adopted throughout the chapters covering orthographic projection. Wwith a strong emphasis on creating accurate and clear drawings, a chapter on AutoCAD software is also included in the book. The chapter is organized such that it describes the application of the software presenting and applying these standards. More importantly, all the elaborations of the software are alone making use of screen captures taken from the AutoCAD screen so that a novice user will be able to understand its application easily. A large number of solved examples with detailed steps examining methods for solving them have been incorporated to help students solve the unsolved problems.

This book is prepared according to the ACI Code 2019 for buildings and AASHTO LRFD Specifications for Bridges 2007. The units used throughout the presentation are the SI units, however, the expressions and examples are also given in US Customary units in the starting chapters to keep continuity with the traditional system of units. It is tried that the three main phases of structural design, namely load determination, design calculations and detailing are introduced to the beginner. This book is useful with the 2nd part of the same book. The comments on the previous editions of the book sent by colleagues, fellow engineers and students are incorporated in this edition. All persons who contributed in this regard are greatly acknowledged. Suggestions for further improvement of the presentation will be appreciated and will be incorporated in the future editions.

This book is prepared according to the 2014 ACI Code for buildings and AASHTO LRFD Specifications for bridges. The units used throughout the presentation are the SI units, however, the expressions and examples are also given in US Customary units in the starting chapters to keep continuity with the traditional system of units. It is tried that the three main phases of structural design, namely load determination, design calculations and detailing are introduced to the beginner. This book is useful with the 2nd part of the same book. After the printing of the first and second editions, the comments send by colleagues, fellow engineers and students are acknowledged with thanks. Suggestions for further improvement of the presentation will be highly appreciated and will be incorporated in the future editions.

After the publication of the third edition of this book, new AISC Specification was released in 2010 that contains combined provisions for ASD and ARFD methods and formulas in non-dimensional format to be used both for the FPS and the SI units. This fourth edition is prepared after revising the original book in the light of the new Specification of AISC 2016. The book contains tables required for the 345 Grade Steel and BS sections. The author is highly thankful to all the engineers and students who have participated in the improvement of this book through their questions and queries. As before, the detailed design procedure of the steel structures is explained in a separate book titled " Steel Structures " which frequently refers to this book for the properties tables and the design aids. Suggestions for further improvement of the presentation will be highly appreciated and will be incorporated in the future editions.

This book is prepared according to the 2019 ACI Code for buildings and 2007 AASHTO LRFD Specifications for bridges. The units used throughout the presentation are the SI units according to the official system of units in Pakistan. As in Part-I of the same series of books, it is tried that the three main phases of structural design, namely load determination, design calculations and detailing are together introduced to the beginner. In this set of two books, besides the usual reinforced concrete design, retaining walls, yield line and strip method of slab design, slabs-on-grade, moment-curvature relationships, water retaining structures, prestressed concrete, dome design, special types of stairs, machine foundations, pipe design for D-load, bridge super-structure design, bridge sub-structure design, ordinary RC wall subjected to in-plane and out-of-plane bending, special RC wall, coupling beam, basics of formwork design, plain concrete properties and repair / rehabilitation of concrete structures are also presented. This book is useful with the 1st part of the same book.

At the end of year 2005, new AISC Specification was released that contained formulas for both Allowable Stress Design and Load and Resistance Factor Design in non-dimensional format to be used for both the FPS and SI units. In year 2010, this specification for steel structures design and the seismic provisions were updated. This specification was further revised in 2016. This book is prepared in the light of the new Specifications. AASHTO LRFD Specifications are used to present the concepts of bridge loading and the design procedure. As in the first edition, in place of explaining the various aspects of design such as checking various strength capacities, stability requirements and serviceability limits in separate chapters, complete design including all the major steps of design are presented in individual units for various types of members. It is expected that this procedure gives true picture of design process to the beginners and the practicing engineers. This book is more useful if it is used along with another publication " LRFD Steel Design Aids " , termed as Design Aids in this book. The flow charts given in different sections of this book may easily be computerized to get custom-made computer programs for personal use. International system of units (SI) is used throughout the book. Suggestions for further improvement of the presentation will be highly appreciated and will be incorporated in the future editions.
