before it can be used, whether using coal, oil, natural gas or other fuels. Once it has been generated, the electricity goes to transformers to make it the correct voltage and then is supplied to homes and businesses through a network of cables and pylons.

### *Generation and transmission of electricity*

Electricity is an energy currency, rather than an energy source, which means that electrical generation needs to start from a primary energy source like a fuel or a primary energy flow. These fuels and flows are usually turned into electric current which transmits electric power to the grid . Power plants are the most commonly used energy conversion
