Maurios Gros, who died in December 2001, was a pioneer and leading thinker in the field of modern linguistics. Long before computers could facilitate large-scale, lexically-based language study, he and his team began building an exhaustive, empirically-based inventory of the "lexicon-grammar" of French which, thirty years later, still remains the most complete syntax-based lexicon available. Researchers all over the world have adopted the Gros model of description, which serves as a computational model for any language. As can be seen in the contributions in this volume, it has been applied to languages as different as Arabic, Chinese, English, Greek or Korean (as well as the major Romance languages, of course). In this volume the reader will also find a number of articles by eminent linguists who were close friends of Maurice Gros, and frequently in dialogue with him on linguistic issues. No matter whether they shared his theoretical views, or his particular empirical methods of description, they each had great respect for his work, especially for the close-grained linguistic analysis which has set a benchmark for future generations.

Le existing major works on the history of the French language were published more than fifty years ago and are characterized by a largely a-theoretical approach. More than a hundred years after Ferdinand Brunot began to publish his monumental work, the ambition of the Grands Grammaire Historique du Fran-ç-ais (GGHF) is to present the evolution of the French language in its totality, building on the contributions achieved by descriptive and theoretical research in recent decades. It also offers several innovative aspects. The GGHF is a grammar organized by themes rather than by periods, and it reflects all major areas currently under debate in linguistics (phonetics / phonology, morphology, syntax, semantics, etc.). In addition, it is based on a balanced corpus of several million words that has been designed especially for the GGHF (with a selection of representative texts for each century). The consideration of this corpus and the quantification of facts enable the authors to establish a close relationship between variation and change; we believe that the interaction of these two aspects is the cornerstone for the interpretation of the evolution of French and of language in general. In addition to the description of the evolution of French, the analysis of language change thus also aims to contribute to the study of the evolution of language as such.
