I Am a Strange Loop is a 2007 book by Douglas Hofstadter, examining in depth the concept of a strange loop to explain the sense of "I". The concept of a strange loop was originally developed in his 1979 book Gödel, Escher, Bach. In the end, we are self-perceiving, self-inventing, locked-in mirages that are little miracles of self-reference.

You will not go away understanding what Hofstadter means by "A Strange Loop". Expecting science or philosophy, you will find autobiography. For those who are curious to find the very best of Hofstadter's ideas, stripped of the autobiography, I highly recommend "Surfaces and Essences". For the "fans", this is not a book you want to miss.

So a strange loop is not a necessary condition for consciousness. If you want to read a far more disciplined analysis of consciousness, I can strongly recommend the works of Hofstadter's friends, David Chalmers and (especially) Daniel Dennett. Or try Thomas Metzinger. Sorry Hofstadter, you must try harder.

When I saw a copy of "I Am a Strange Loop" in a used-book store, and Hofstadter said in the intro it was his update of "Godel, Escher, Bach," I figured this was my chance to rediscover the concepts in "Godel, Escher, Bach." Well, I did, but I can't say I was happy with the result.

In 1993 Hofstadter's wife Carol died suddenly of a brain tumor at only 42, leaving him with two young children to care for . . . I Am a Strange Loop is a work of rigorous thinking." " I Am a Strange Loop is vintage Hofstadter: earnest, deep, overflowing with ideas, building its argument into the experience of reading it-for if our souls can incorporate those of others, then I Am a Strange Loop can transmit Hofstadter's into ours.

This book argues that the key to understanding selves and consciousness is a special kind of abstract feedback loop inhabiting our brains. Deep down, a human brain is a chaotic soup of particles, on a higher level it is a jungle of neurons, and on a yet higher level it is a network of abstractions that we call "symbols."

I Am A Strange Loop is well-known and loved by lots of geeky readers, but I can't really count myself as one of them, sadly. I wanted to like this book because of its many recommendations by fellow nerds, but it's hard-going. Hofstadter is fascinated, obsessed with the idea of self-referential paradoxes, or 'loopiness' as he calls it. Woe betide you if you find them even slightly less ...

There is much here and I do not doubt that writing "I am a Strange Loop" was a labor of love in more ways than one. It is, as with other somatic theories, even possible that oscillating fields in the brain have a lot to do with consciousness and personal identity. There are still reasons to believe that this is not the whole story.
