Longitude

Longitude (/ ˈl ɒ ŋ ɪ t u d /, AU and UK also / ˈl ɒ ŋ ɪ t ʊ d /), is a geographic coordinate that specifies the east–west position of a point on the Earth's surface, or the surface of a celestial body. It is an angular measurement, usually expressed in degrees and denoted by the Greek letter lambda (λ). Meridians (lines running from pole to pole) connect points with the same ...

Longitude - Wikipedia

The longitude has the symbol of lambda and is another angular coordinate defining the position of a point on a surface of earth. The longitude is defined as an angle pointing west or east from the Greenwich Meridian, which is taken as the Prime Meridian. The longitude can be defined maximum as 180 ° east from the Prime Meridian and 180 ° west ...

~~Longitude | Definition of Longitude by Merriam-Webster~~

Distance east or west on the Earth's surface, measured in degrees from a certain meridian, usually the prime meridian at Greenwich, England, which has a longitude of 0 ° . The distance of a degree of longitude is about 69 statute miles (111 kilometers) or 60 nautical miles at the equator, narrowing to zero at the poles.

~~Longitude - definition of longitude by The Free Dictionary~~

The meridian opposite the Prime Meridian (on the other side of the Earth) is the 180 ° longitude and is known as the antimeridian. Modern timekeeping systems use longitudes as references to keep time. Time zones are defined by the Prime Meridian and the longitudes. An Easy Way to Remember .

~~What Is Longitude and Latitude?~~

Longitude is a measurement of location east or west of the prime meridian at Greenwich, the specially designated imaginary north-south line that passes through both geographic poles and Greenwich, London.

~~Latitude and longitude | Definition, Examples, Diagrams ...~~

To measure longitude east or west of the Prime Meridian, there are 180 vertical longitude lines east of the Prime Meridian and 180 vertical longitude lines west of the Prime Meridian, so longitude locations are given as __ degrees east or __ degrees west.

~~Understanding Latitude and Longitude - Journey North~~

If you divide the circumference of the earth (approximately 25,000 miles) by 360 degrees, the distance on the earth's surface for each one degree of latitude or longitude is just over 69 miles, or 111 km. Note: As you move north or south of the equator, the distance between the lines of longitude gets shorter until they actually meet at the poles.

~~Latitude And Longitude - Facts and Map - WorldAtlas.com~~

Address field - enter an address, city, state, place name, postal code or any other name for a location into this field, select "North America" or "Europe" from the region menu, and then click the find button to retrieve its latitude-longitude coordinate pair. Your result will be displayed in the box either under or to the right of the find button (depending on the width of the device you're ...

~~Find Latitude and Longitude~~

Longitude is the angular distance of a place east or west of the meridian at Greenwich, England, or west of the standard meridian of a celestial object. Latitude is the angular distance of a place north or south of the earth's equator.

~~GPS Coordinates - Latitude and Longitude Finder~~

Longitude degrees extend 180 ° east and 180 ° west from the prime meridian, an imaginary line dividing the earth into an eastern and

western hemisphere, and meet to form the International Date Line in the Pacific Ocean at 180 ° longitude. 0 ° longitude falls in Greenwich, England, where a physical line showing the division between the Eastern and Western hemispheres was constructed.

~~What Are Latitude and Longitude Lines on Maps?~~

The distance of a degree of longitude is about 69 statute miles or 60 nautical miles (111 km) at the equator, decreasing to zero at the poles. Longitude and latitude are the coordinates used to identify any point on the Earth's surface.

~~Longitude | Definition of Longitude at Dictionary.com~~

Longitude: The True Story of a Lone Genius Who Solved the Greatest Scientific Problem of His Time is a best-selling book by Dava Sobel about John Harrison, an 18th-century clockmaker who created the first clock (chronometer) sufficiently accurate to be used to determine longitude at sea—an important development in navigation.

~~How to pronounce LONGITUDE in English~~

Longitude lines run from the earth's north to south poles, and are used to identify a place's easterly or westerly position on Earth. Longitudes are geographical points of direction that identify how east or west a position is on the Earth. The points are measured in degrees and symbolized by the Greek letter λ (Spelt as lambda).

~~What is Longitude? - WorldAtlas~~

The North Pole is 90 ° N and the South Pole is 90 ° S. The line labelled 0 ° longitude is called the Prime Meridian or the Greenwich Meridian and runs through London. Anything lying east of the...
