When setting photoflash exposures, the guide number (GN) of photoflash devices (flashbulbs and electronic devices known as "studio strobes", "on-camera flashes", "electronic flashes", "flashes", and "speedlights") is a measure photographers can use to calculate either the required f/stop for any given flash-to-subject distance, or the required distance for any given f/stop. To solve for either of these two variables, one merely divides a device's guide number by the other.

Guide number - Wikipedia

GN = Subject Distance from Flash Source x f/Stop. Guide numbers are based on a simple mathematical equation that states: the light output of an electronic flash is equal to the distance of the flash unit from the subject multiplied by the lens aperture, or f/stop.

Understanding Guide Numbers | B&H Explora

The flash guide number (GN) is a measure of the distance at which the flash can illuminate a subject. The higher the guide number, the greater the distance at which the light from the flash is sufficient for optimal exposure. The formula for calculating the guide number is as follows: Guide number (GN)=distance (meters) × aperture (f-number)

Flash Level (Guide Number) - Nikon | Imaging Products

Guide Number Reporting. If you go shopping for an electronic flash online, you'll probably see ...

Flash Guide Number

Guide Number (GN) is a numerical method used to determine exposure of direct flash for Manual flash power levels, to automatically deal with the Inverse Square Law, making the math be trivial. The reference base is a known accurate Guide Number for one situation, from which other situations can be calculated.

Understanding Camera Flash Guide Numbers, plus GN Calculator

In short, guide numbers on a flash indicate how much light that flash can produce. You'll see them in the specs indicated in either meters or feet. The higher the guide number the further the flash will reach. The specifications will also show the flash settings at which the guide number is calculated, including the ISO and flash zoom setting.

Guide Numbers Explained for Manual Flash - Calculator ...

A flash's power is determined by its Guide Number, with low Guide Numbers (GN) indicating a weak or less powerful flash than one with a high GN. For ease of comparison, most flash GNs are rated for an ISO 100 film. If you use a film with a lower ISO the GN will be lower, and, conversely, if you use a higher speed film the GN will be higher.

Flash Photography - Understanding Guide Numbers

GN = distance \* f-stop Your flash's Guide Number (GN) is determined at 100 ISO, when it gives correct exposure at a certain distance, multiplied by the f-stop The idea that we can figure out the manual flash exposure by the combination of distance and aperture (for a given ISO setting), was covered in these recent topics:

What Does the Diastolic Blood Pressure Number Mean? The diastolic reading, or the bottom number, is the pressure in the arteries when the heart rests between beats. This is the time when the heart ...

Blood Pressure Chart & Numbers (Normal Range, Systolic ...

Since different manufacturers give guide numbers based on different filmspeeds(50 or 100 ASA) or even no guide number for their flashes Feininger suggests the user to find out the guide number himself by making 3 test exposures with the film he wants to use for flash photography.

Guide number | Camerapedia | Fandom

The Guide International Service (G.I.S.) was an organisation set up by the Girl Guides Association in Britain in 1942. Their aim was to send teams of adult Girl Guides to Europe after World War II to aid with relief work. It is described in two books: All Things Uncertain by Phyllis Stewart Brown and Guides Can Do Anything by Nancy Eastick. A total of 198 Guiders and 60 Scouts, drawn from ...

Girl Guides - Wikipedia

Specifically, a flash unit's guide number indicates how much light the unit will emit in relation to a standard film speed. The higher the guide number, the more powerful the flash. This number is usually indicated in the owner's manual of the flash. It's

Demystifying Flash Guide Numbers

We recommend using it as a guide and quality check for your bed sheets. You should be looking for a range from 200 to 400. If the number is between 150 and 180, then the sheets are going to be rough and not at all soft. A number over 400 means that the fibers are likely woven together to get an inflated figure.

The Guide

The guide number of a flash is the product of the f/stop of the exposure at a given distance at ISO 100. Wikipedia has a whole page on it here. But that's all pretty math-centered and kinda inverse-squarish. And you really do not need to know that stuff to use GN to zero in on a first exposure.
